

NEW CONCEPTS MANAGEMENT SOLUTIONS

Lean and Six-Sigma are both process improvement methodologies. Lean is about *speed* and *efficiency*. Six-Sigma is about *precision* and *accuracy*. Both are keys to a successful business strategy that focus on reducing cycle time, eliminating waste and fulfilling the "needs of the customer."

Course Objectives

This one-day interactive workshop provides participants an overview of basic Lean Six-Sigma principles, terminology and concepts. Participants will learn why it is essential to "see the flow" of information and materials throughout the value stream and insight into the importance of defining the present state and the future state.

The main objective of this training event is to *foster* Lean and Six-Sigma thinking.

Who Should Attend

Anyone who want to learn more about continuous improvement principles and methodologies in support of cost-savings initiatives, such as the Air Force Smart Operations for the 21st Century (AFSO21).

Workshop Goals

- Understand the basic concepts of Lean and Six Sigma.
